

YAVNESH SHARMA

SENIOR BACKEND / PLATFORM ENGINEER (PYTHON)

SaaS • Payments • Distributed Systems • ETL & AI Pipelines

🌐 Global Remote | 🇮🇳 Based in India | ✉️ yavnesh.sharma@gmail.com | 🔗 github.com/yavnesh

SUMMARY

Senior Backend / Platform Engineer with **6+ years of experience** building and owning **revenue-critical SaaS systems**. Specialized in **subscription billing, distributed messaging architectures, near real-time ETL pipelines, and AI-enabled backend services**. Proven ability to design **fault-tolerant, scalable microservices** in fast-moving startup environments, collaborate directly with product and clients, and operate production systems end-to-end.

TECHNICAL EXPERTISE

Backend & Platform

- Python, Django, REST APIs, Microservices, Asynchronous Processing

Payments & SaaS

- Stripe Subscriptions, Webhooks, Invoicing, Idempotency, RBAC, License Management

Messaging & Data Pipelines

- RabbitMQ, Event-Driven Architecture, ETL Pipelines, Near Real-Time Processing

Datastores

- PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps

- AWS, Docker, CI/CD (GitHub Actions)

Frontend (Supporting)

- React, Next.js
-

PROFESSIONAL EXPERIENCE

Senior Backend / Platform Engineer

Salient Minds (US-based SaaS | Remote)

2024 – 2026

- **Designed and owned an end-to-end subscription billing microservice** using Stripe, supporting multi-tier plans, invoicing, and license-based feature entitlements.
- Implemented **webhook-driven payment state management** with idempotent processing to ensure correctness across retries, failures, and delayed events.
- Architected payment workflows following **eventual consistency principles**, decoupling UI actions from the final billing state.
- Built a **Microsoft Teams bot platform** to ingest meeting transcripts and group chats, handling **~5k events/day** across **100+ users**.
- Designed an **event-driven messaging architecture using RabbitMQ** to decouple ingestion from downstream ETL and AI services.
- Implemented **near real-time ETL pipelines** to extract, transform, and route conversational data to analytics and LLM-based prompt services.
- Collaborated directly with product, frontend, and clients; supported **production deployments and live incident resolution**.

Tech: Python, Django, Stripe, RabbitMQ, PostgreSQL, AWS, Docker

Senior Software Engineer

Mrikal Studios

2022 – 2023

- Led backend development of an **anti-counterfeit QR verification system** used across large product inventories.
- Built and optimized **analytics dashboards** using Apache Superset to improve operational visibility and decision-making.
- Integrated external APIs and data sources to support product analytics and reporting pipelines.

Technical Lead / Mentor (Engineering)

WhiteHat Jr

2020 – 2022

- Acted as a **technical lead** for multiple early-stage product teams, guiding system design, database modeling, and backend architecture decisions.
 - Reviewed code for quality, performance, and maintainability, contributing to **significant improvements in application structure and reliability**.
 - Supported the delivery of **multiple production-ready applications per month**, ensuring adherence to engineering and design standards.
 - Collaborated closely with cross-functional stakeholders and mentored engineers on building scalable, maintainable software systems.
-

Senior Software Engineer

National Olympiad Foundation

2019 – 2020

- Developed an **AI-driven evaluation system** automating large-scale Olympiad assessments, saving **8,000+ man-hours annually**.
- Designed a **CRM platform supporting 400,000+ student enrollments**, handling admin workflows and reporting at scale.
- Standardized automated **OMR detection pipelines**, reducing manual errors and processing time.

Backend / Full Stack Engineer

Earlier Experience (Edurer Knowledge Labs)

2016–2019

- Built a production **Learning Management System (LMS)** with analytics and reporting.
 - Designed and implemented a **WebRTC-based live streaming system** for real-time classes.
-

PROJECTS

Tewsletter — AI Content Automation Platform

- Built an AI-driven blogging platform that identified trending topics via Google APIs, generated long-form content and images using LLMs, and supported admin review, regeneration, and controlled publishing workflows.

MyMentorist — Mentorship SaaS Platform

- Developed a mentorship SaaS platform with Stripe-based subscriptions and backend-driven access control.
-

EDUCATION

Bachelor of Technology (Information Technology)

- Global Technical Campus | 2012–2016
